

Industrial engineering & system supplier

Solutions in metal - plastic - rubber

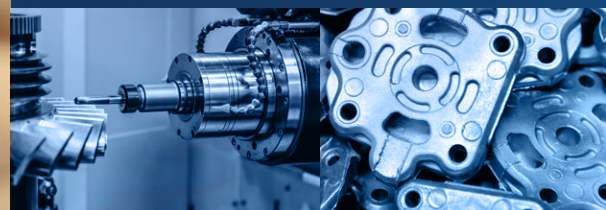

TECHWAY - The strongest link in your supply chain

Techway is an international producer with core competence in the field of industrial engineering, mechanical components supply, and product assembly.

We help you develop, evaluate, manufacture, assemble, and store your products to be delivered to you or your customers. Our global production network is a guarantee of the best price-quality performance. Our quality-first rule is the final step to achieving your complete satisfaction.

We are your best partner for strategic realignment and optimization of your production, more flexible and efficient procurement, and leaner logistics.

60+
PARTNERS

Our production partners are the best companies in their industries.

20+
YEARS OF EXPERIENCE

Engineering is our passion, and constant success has been our aim for many years.

1
GOAL

Your complete satisfaction.

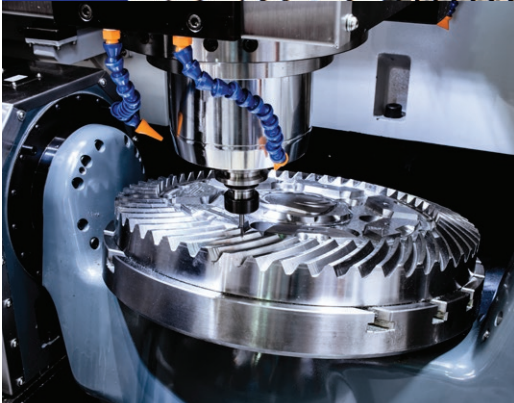

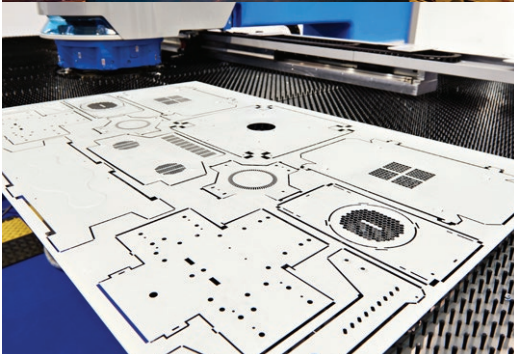

Our service is our passion - in technology we trust

1. Product development & advice:

In all stages of product development, from concept through market release and beyond, technical and commercial advice from an experienced international producer is a valuable service. In many cases, manufacturing process optimization or small design changes result in better quality or reduced price of the developed product. We always follow and search for the latest updated manufacturing methods to serve our customers with the best solutions that the market can offer.

Main services:

- Product mechanical engineering
- Product improvement suggestions
- Production technology & cost evaluation

2. Sheet metal & light construction parts supply:

With advanced hi-tech equipment and highly qualified employees, we produce sheet metal products and customized steel constructions for industry. Popular construction materials like steel, stainless steel, copper, and aluminum are cut, bent, welded, brushed, surface protected, and assembled according to your drawings and requirements. Throughout our international production network, we offer a high level of flexibility, and we guarantee fast and reliable supply of small to large quantities.

Main Technologies:

- CNC and press stamping
- CNC laser and plasma cutting (plates, tubes & profiles)
- CNC bending (plates, tubes & profiles)
- Welding & Robot welding (Mig/Mag, Tig, Electric)
- All types of surface protections

3. CNC machining parts supply:

We produce high precision parts with different cnc machining technologies or their combinations. From a solid or casted material, your products can be finished with all types of surface protections and packed for scratch-free delivery. Production ranges from prototyping to small and large quantities. You receive everything from a single source and right on time. We can always assist you in the early development phase to find the ideal, cost-efficient production technology for your needs.

Main Technologies:

- CNC Milling (3, 4 & 5 axis)
- CNC Turning (3, 4 & 5 axis)
- CNC Grinding & engraving
- All types of surface protections

4. Die casted, rubber & plastic parts supply:

Our offer includes die casting of AL and ZN based alloys. We offer complete service, from product design, tooling, and casting to final mechanical and surface treatment. For rubber and plastic injection molding technology, we also offer complete service. Products can be molded with all commercially available materials. We can deliver single or multi-cavity molds, depending on your needs.

Main Technologies:

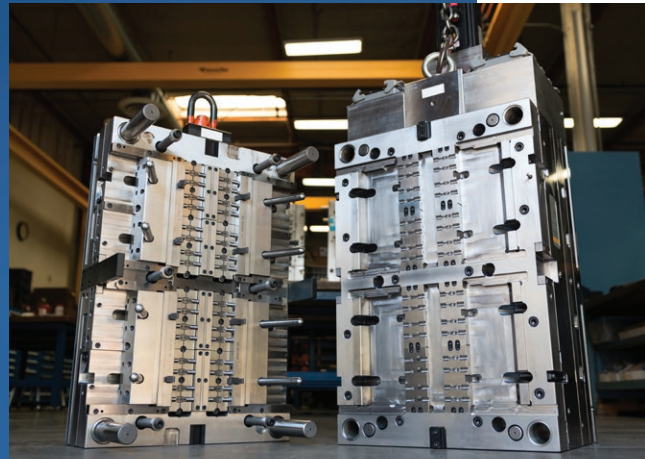

- Die casting (AL & ZN based alloys)
- Plastic molding (all commercially available materials)
- Rubber molding (all commercially available materials)
- All types of mechanical and surface treatments

5. Complete service & assembly:

Our full range capabilities include product development, component sourcing, manufacturing with multi production technologies, final assembly, final inspection, final packaging, warehousing and delivery of finished product – worldwide.

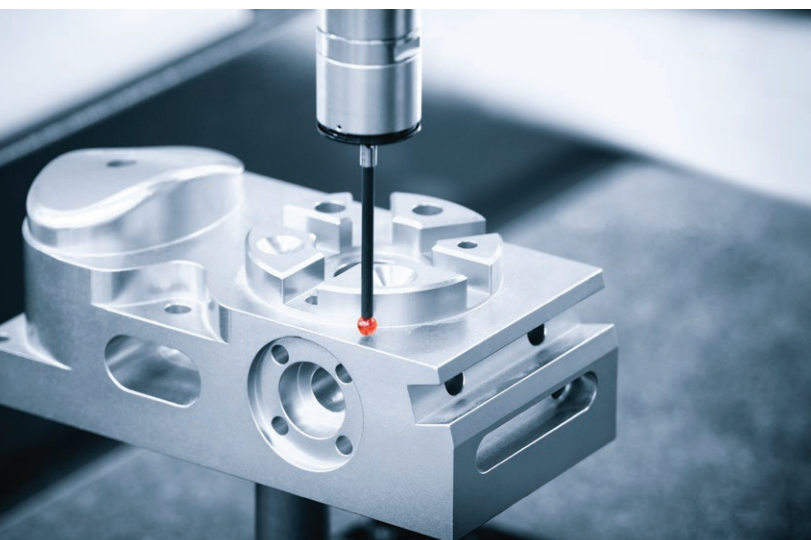

Main services:

- Engineering & quality control
- Manual assembly & Automated assembly
- All types of packaging materials (carton, wood, foam)
- All types of logistics possibilities (courier, truck, rail, air, ship)

Quality management – our first priority

Your project will be carefully monitored and controlled by Techway quality management protocols and inspections. Many of our production partners are additionally independently certified to deliver you the best quality right on time.

Area of operation

We are located in Slovenia, EU. Our main production partners come from countries like Slovenia, Italy, Hungary, Croatia, BiH and Serbia. For special projects, we also have partners in Turkey and China.
